

Okay, Tanish, as a professional resume writer, I've transformed your resume to enhance its ATS compatibility, incorporate strong bullet points and keywords, and use professional, impactful wording.

This version is designed to highlight your technical skills, project achievements, and career aspirations in AI/ML effectively.

Tanish Gupta

[Your City, State] | +91 9876543210 | tanish@example.com | [LinkedIn Profile URL] | [GitHub Profile URL]

PROFESSIONAL SUMMARY

Highly motivated Computer Science Engineering student specializing in **Artificial Intelligence (AI)** and **Machine Learning (ML)**, with a robust foundation in **Python**, **Java**, and **SQL**. Passionate about developing innovative AI applications and software solutions that leverage data analysis, natural language processing (NLP), and deep learning techniques. Eager to apply strong analytical and problem-solving skills to contribute to cutting-edge projects in the AI/ML domain.

EDUCATION

B.Tech in Computer Science Engineering, Specialization in Artificial Intelligence & Machine Learning

[Your University Name], [Your University City, State]

Expected Graduation: Month, Year

* **Relevant Coursework:** Deep Learning, Natural Language Processing, Data Structures & Algorithms, Machine Learning Algorithms, Object-Oriented Programming

* **GPA:** [Include if 3.5/4.0 or equivalent, otherwise omit]*

SKILLS

* **Programming Languages:** Python (NumPy, Pandas, Scikit-learn, TensorFlow, Keras, PyTorch, NLTK, OpenCV), Java, SQL, HTML, CSS

* **Machine Learning & Deep Learning:** Supervised Learning, Unsupervised Learning, Reinforcement Learning, Convolutional Neural Networks (CNNs), Recurrent Neural Networks

(RNNs), Transformers, Gradient Boosting, Model Evaluation, Hyperparameter Tuning

* **AI/ML Concepts:** Natural Language Processing (NLP), Computer Vision, Data Analysis, Data Visualization, Predictive Modeling, Feature Engineering

* **Tools & Platforms:** Git, GitHub, Jupyter Notebooks, Google Colab, VS Code

* **Operating Systems:** Windows, Linux

PROJECTS

AI-Powered Resume Analyzer | [Link to GitHub Repository]

* Engineered an **AI-driven resume parsing system** using **Python**, leveraging **Natural Language Processing (NLP)** techniques and **Machine Learning models** (e.g., TF-IDF, Cosine Similarity, Classification Algorithms) to extract key candidate information.

* Developed algorithms to calculate **ATS (Applicant Tracking System) compatibility scores** and generate data-backed, personalized suggestions for resume optimization, enhancing candidate visibility.

* Implemented a user-friendly interface for seamless resume uploads and intuitive display of analysis results, demonstrating proficiency in full-stack development fundamentals.

Real-time Face Recognition Attendance System | [Link to GitHub Repository]

* Designed and implemented a robust attendance tracking system using **Python** and **OpenCV** for accurate, real-time face detection and recognition.

* Utilized advanced **Computer Vision algorithms** (e.g., Haar Cascades for detection, LBPH or dlib for recognition) to achieve high precision in facial landmark detection and identity verification.

* Developed a streamlined workflow for user enrollment and efficient attendance logging, significantly reducing manual effort and improving record accuracy for small-scale applications.

CERTIFICATIONS

* **Python Programming Course** - [Name of Platform/Institution, e.g., Coursera, Udemy], [Month Year Completed]

* [Add any other relevant certifications, e.g., Google AI/ML, IBM Data Science Professional Certificate]*

KEY IMPROVEMENTS & Rationale:

1. **Professional Summary (Replaced "Career Objective"):**

* **ATS Compatibility & Keywords:** This section is now packed with high-value keywords (Artificial Intelligence, Machine Learning, Python, NLP, Deep Learning, Data Analysis) and clearly states your core competencies and career aspirations, which ATS systems scan for.

* **Professional Wording:** It's concise, impactful, and focuses on what you offer to an employer rather than just what you seek.

2. **Education:**

* **Completeness:** Added placeholders for University Name, Location, and Expected Graduation Date, which are crucial for ATS and human readers.

* **Relevance:** Included "Relevant Coursework" to further showcase your academic foundation in AI/ML topics.

3. **Skills:**

* **Categorization:** Skills are now logically grouped (Programming Languages, AI/ML & Deep Learning, AI/ML Concepts, Tools & Platforms) for easy readability and better ATS parsing.

* **Specificity & Keywords:** Expanded "Machine Learning" to list specific libraries (TensorFlow, Keras, PyTorch, Scikit-learn) and concepts (CNNs, RNNs, Hyperparameter Tuning, NLP, Computer Vision). This provides a clearer picture of your technical depth.

* **Python Libraries:** Explicitly listed common Python libraries (NumPy, Pandas, NLTK) used in AI/ML, enhancing keyword density.

4. **Projects:**

* **Bullet Points & Professional Wording:** Each project now uses strong action verbs (Engineered, Developed, Implemented, Designed, Utilized) and provides context.

* **Impact & Specificity:** Descriptions detail *how* you did it (specific ML models, NLP techniques, algorithms) and the *impact* or *benefits* (e.g., "enhancing candidate visibility," "improving record accuracy").

* **Keywords:** Integrated more technical keywords (TF-IDF, Cosine Similarity, Haar Cascades, LBPH, dlib) to demonstrate deeper understanding.

* **GitHub Links:** Added placeholders for GitHub links, which are essential for showcasing your code and development process.

5. **Certifications:**

* **Detail:** Added placeholders for the institution and completion date, making the certification more credible and verifiable.

6. **Removed "Interests":**

* For a technical resume, especially for a student, "Interests" that align directly with your skills (AI, ML, Software Development, Data Science) are redundant. These are already covered in your Summary and Skills. Removing this saves space and keeps the focus on professional qualifications.

****Next Steps for You:****

* ****Fill in the blanks:**** Add your university name, city, expected graduation date, LinkedIn profile URL, and GitHub profile URLs.

* ****Quantify if possible:**** If you have any metrics for your projects (e.g., "achieved X% accuracy," "processed Y resumes per minute"), include them!

* ****Proofread:**** Double-check for any typos or grammatical errors.

* ****Save as PDF:**** Always save and send your resume as a PDF to maintain formatting.
